

Description

General

The SF-MM2 is small form factor pluggable module with standard LC duplex connector for fiber communications as Fast Ethernet and OC-3/STM-1 SONET/SDH. This module is designed for multi-mode fiber and operates at a nominal wavelength of 1310 nm with cost effective and high performance. It is with the SFP 20-pin connector to allow hot plug capability.

Transmitter Section

The transmitter consists of a high-performance 1310 nm Fabry-Perot (FP) laser in the optical subassembly (OSA), which is housed within a metal package. In addition, this component is also class 1 laser compliant with according to International Safety Standard IEC-825

Receiver Section

The receiver contain of an InGaAs PIN photodiode coupled to a high sensitivity transimpedance amplifier (TIA) in an OSA. This OSA combination is mated to a post amplifier IC that provides the post amplification and LOS (Loss of Signal) indication circuit, which provides LVTTTL logic high state output when a unusable input optical signal level is detected.
