

Description

General

The SFG-WL3 are small form factor pluggable modules for bi-directional serial optical data communications such as Gigabit Ethernet IEEE802.3z and Fiber Channel. These modules are designed for single mode fiber with high performance by using 1310 / 1550 nm wavelength. It is with the SFP 20-pin connector to allow hot plug capability.

Transmitter Section

The transmitter consists of a high-performance 1310 nm Fabry-Perot (FP) or 1550 nm MQW DFB structure lasers in the bi-directional optical subassembly (BOSA), which is housed within a metal package. In addition, this component is also class 1 laser compliant with according to International Safety Standard IEC-825.

Receiver Section

The receiver contain of an integrated planar InGaAs PIN photodiode coupled to a high sensitivity trans-impedance amplifier (TIA) in an BOSA. This BOSA combination is mated to a post amplifier IC that provides the post amplification and SD (Signal Detect) indication circuit, which provides LVTTTL logic low state output when an unusable input optical signal level is detected.
